MyAPNIC-Lite

Demo

Background

- Feedback by members from low-bandwidth locations
  - Slow response time
  - Page structure and layout
    - Need quicker access to the most used functions

Highlight

- A new version of MyAPNIC that will replace the current system
  - Transmits smaller blocks of html data over the wire
  - Deployed on a new, faster, dedicated hardware, utilizing compression technology

Changes

- Back-end software change
  - Strip out unnecessary embedded html codes
- HTML code change
  - Reduce the use of images
  - Use of CSS to exploit local rendering speed
  - Hierarchical menu, smaller page size
- System change
  - Use compression technique supported by most modern browser
  - Dedicated hardware
