Final /8 Policy Documentation

Policies for IPv4 address space management in the Asia Pacific region

- Section 9.10, “Distribution of the final /8 worth of space in the unallocated APNIC IPv4 address pool”

<http://www.apnic.net/policy/add-manage-policy#9.10>

What Space is the Final /8?

When the total remaining space in the unallocated APNIC address pool reaches a threshold of a **total of one /8**, the following policies come into force...

- Not the “final /8 block from IANA”
- Decision on what constitutes the “total of one /8” left as an operational decision

Allocations

- Each APNIC account holder will be eligible to request and receive a **single allocation from the remaining /8 worth of space**
- ...All APNIC account holders are eligible to receive only one allocation from the **final /8 worth of address space**. This applies to both current and future account holders.

(9.10.1 Allocations to LIRs)

- Put simply:
 - Existing and new APNIC account holders can receive a single /22 from the final /8

/16 Reservation

- A /16 will be held in reserve for future uses, as yet unforeseen
(9.10.2 Allocations for future uses)
- The /16 will be unreserved if a use hasn't been found for it by the time the rest of the final /8 worth of space has been allocated

Transfers

- When we reach the final /8, transfers no longer require any form of evaluation of requirements for eligibility.
 - (3. Transfers of IPv4 addresses, “APNIC transfer, merger, acquisition, and takeover policy”)

Policy is Dynamic

The policy surrounding address management once we reach the final /8 can change

- It can change now OR;
- After we hit the final /8

What is Not Covered by Policy

- How the Secretariat chooses the final /8
- How to handle returned addresses
 - Does it trigger a rollback on the final /8 if returned addresses take IPv4 pool over a total of one /8 worth of space?
 - Does the final /8 allocation policy also apply to returned addresses?
