Story I - SOPA

Stop Online Piracy Act

From Wikipedia, the free encyclopedia

The **Stop Online Piracy Act (SOPA)** is a United States bill introduced by U.S. Representative Lamar S. Smith (R-TX) to expand the ability of U.S. law enforcement to fight online trafficking in copyrighted intellectual property and counterfeit goods. Provisions include the requesting of court orders to bar advertising networks and payment facilities from conducting business with infringing websites, and search engines from linking to the websites, and court orders requiring Internet service providers to block access to the websites. The law would expand existing criminal laws to include unauthorized streaming of copyrighted content, imposing a maximum penalty of five years in prison.

Proponents of the legislation state it will protect the intellectual-property market and corresponding industry, jobs and revenue, and is necessary to bolster enforcement of copyright laws, especially against foreign-owned and operated websites. Claiming flaws in present laws that do not cover foreign-owned and operated websites, and citing examples of "active promotion of rogue websites" by U.S. search engines, proponents assert stronger enforcement tools are needed.

US House to ITU: Hands off the Internet

By Grant Gross, IDG News

The U.S. House of Representatives voted late Thursday to send a message to the United Nations' International Telecommunication Union that the Internet doesn't need new international regulations. The vote was unanimous: 414-0.

SIMILAR ARTICLES:

The House resolution calls on U.S. government officials to tell the ITU and other international organizations that it is the "consistent and unequivocal policy of the United States to promote a global Internet free from government control."

The ITU will host a treaty-writing conference, the World Conference on International Telecommunications (WCIT), in December in Dubai. U.S. officials expect other countries to push for international Internet traffic taxes and for the ITU to take Internet governance away from the Internet Corporation for Assigned Names and Numbers (ICANN) and other organizations.

Some countries may also push for more surveillance of Internet users in the name of fighting spam or fraud,

observers say.

Proposals at the ITU and other U.N. agencies "would justify under international law increased government control over the Internet and would reject the current multi-stakeholder model that has enabled the Internet to flourish and under which the private sector, civil society, academia, and individual users play an important role in charting its direction," reads the House resolution, sponsored by Representative Mary Bono Mack, a California Republican.

Story II - ACTA

Anti-Counterfeiting Trade Agreement

From Wikipedia, the free encyclopedia

The **Anti-Counterfeiting Trade Agreement** (**ACTA**), is a multinational treaty for the purpose of establishing international standards for intellectual property rights enforcement. The agreement aims to establish an international legal framework for targeting counterfeit goods, generic medicines and copyright infringement on the Internet, and would create a new governing body outside existing forums, such as the World Trade Organization, the World Intellectual Property Organization, or the United Nations.

The agreement was signed in October 2011 by Australia, Canada, Japan, Morocco, New Zealand, Singapore, South Korea, and the United States.^[5] In 2012, Mexico, the European Union and 22 countries which are member states of the European Union signed as well.^[6] No signatory has ratified (formally approved) the agreement, which would come into force after ratification by six countries. After entry into force, the treaty would only apply in those countries that ratified it.

Supporters have described the agreement as a response to "the increase in global trade of counterfeit goods and pirated copyright protected works". Trades Unions representing workers in the music, film and TV industries^[7] and large intellectual property-based organizations such as the Motion Picture Association of America and Pharmaceutical Research and Manufacturers of America were active in the treaty's development.

Opponents say the convention adversely affects fundamental rights including freedom of expression and privacy. ACTA has also been criticised by Doctors Without Borders for endangering access to medicines in developing countries.^[8] The secret nature of negotiations has excluded civil society groups, developing countries and the general public from the agreement's negotiation process and it has been described as policy laundering by critics

Tools for Interaction

The Internet Governance Forum

Welcome

The IGF Secretariat would like to welcome you to the IGF Web site. The design is aimed to make the site user-friendly and give it the ability to add on tools for better online collaboration. We welcome your comments and suggestions as we continuously try to improve our ability to foster dialogue on Internet governance.

This Web site aims to promote the Web Accessibility Initiative (WAI) of the World Wide Web Consortium (W3C). It tries to meet the highest standards set by the W3C.

WCIT-12 Overview

The **World Conference on International Telecommunications (WCIT)** convened in Dubai, United Arab Emirates, from 3-14 December 2012, is the first ever WCIT in the history of the International Telecommunication Union.

The conference will consider a review (see PP-06 [Resolution 146](#)) of the [International Telecommunication Regulations \(ITRs\)](#), which define the general principles for the provision and operation of international telecommunications. **Signed by 178 countries, ITRs are a global treaty applied around the world, which:**

- Establish general principles relating to the provision and operation of international telecoms;
- Facilitate global interconnection and interoperability;
- Underpin harmonious development and efficient operation of technical facilities;
- Promote efficiency, usefulness, and availability of international telecommunication services, and
- Treaty-level provisions are required with respect to international telecommunication networks and services.

WCIT2012

Global Challenges from Industries

What Challenge to us ?

- **Only Numbers, Names, Root Servers,... ?**
- **What about the issue raised by IPR?**
- **What about the issues raised by Culture Differences?**
- **What about the issues raised by taxation, mail-order regulation,..?**
- **From the titles, it is not related to us. But the tools, mechanism they use to enforce the regulation, it might touch the fundamental structure which might “endanger” the overall internet. What the role we will be, or we should be? or raising the concern?**

What Numbers and ICANN can do ?

- **Communicate with governments (such as : ICANN GAC, ITU Delegates,...)**
- **Communicate with international organization (such as : ITU, OECD,..)**
- **Communicate with Industries (Internet Industry, Telecom Industry,..)**
- **Analyzing the “interpretation or consequence” as Geoff Huston did**
- **Explain the impact (pros and cons) to internet users globally**
- **Enhance effort for developing countries**
