

Some interesting tools for operators from the RIPE NCC

Robert Kisteleki

RIPE NCC

- **RIPEstat** – status and statistics about Internet Number Resources (and more)
 - <https://stat.ripe.net/>
- **RIPE Atlas** – a community centered measurement network
 - <https://atlas.ripe.net/>

RIPEstat

- A “one stop shop” if you want to know more about ASNs or IP prefixes (and more)
- A service (website and CLI) built to explain various aspects of these resources:

Routing

Anti-abuse

DNS

Geographical

Registration

Activity/Measurements

- Data and visualisations are both available
- Coming: support for countries and hostnames

Routing Status (AS3333)

AS3333 is visible by **97%** of 100 IPv4 and **99%** of 92 IPv6 RIS full peers.

🕒 First ever seen before **Jan 2001**.

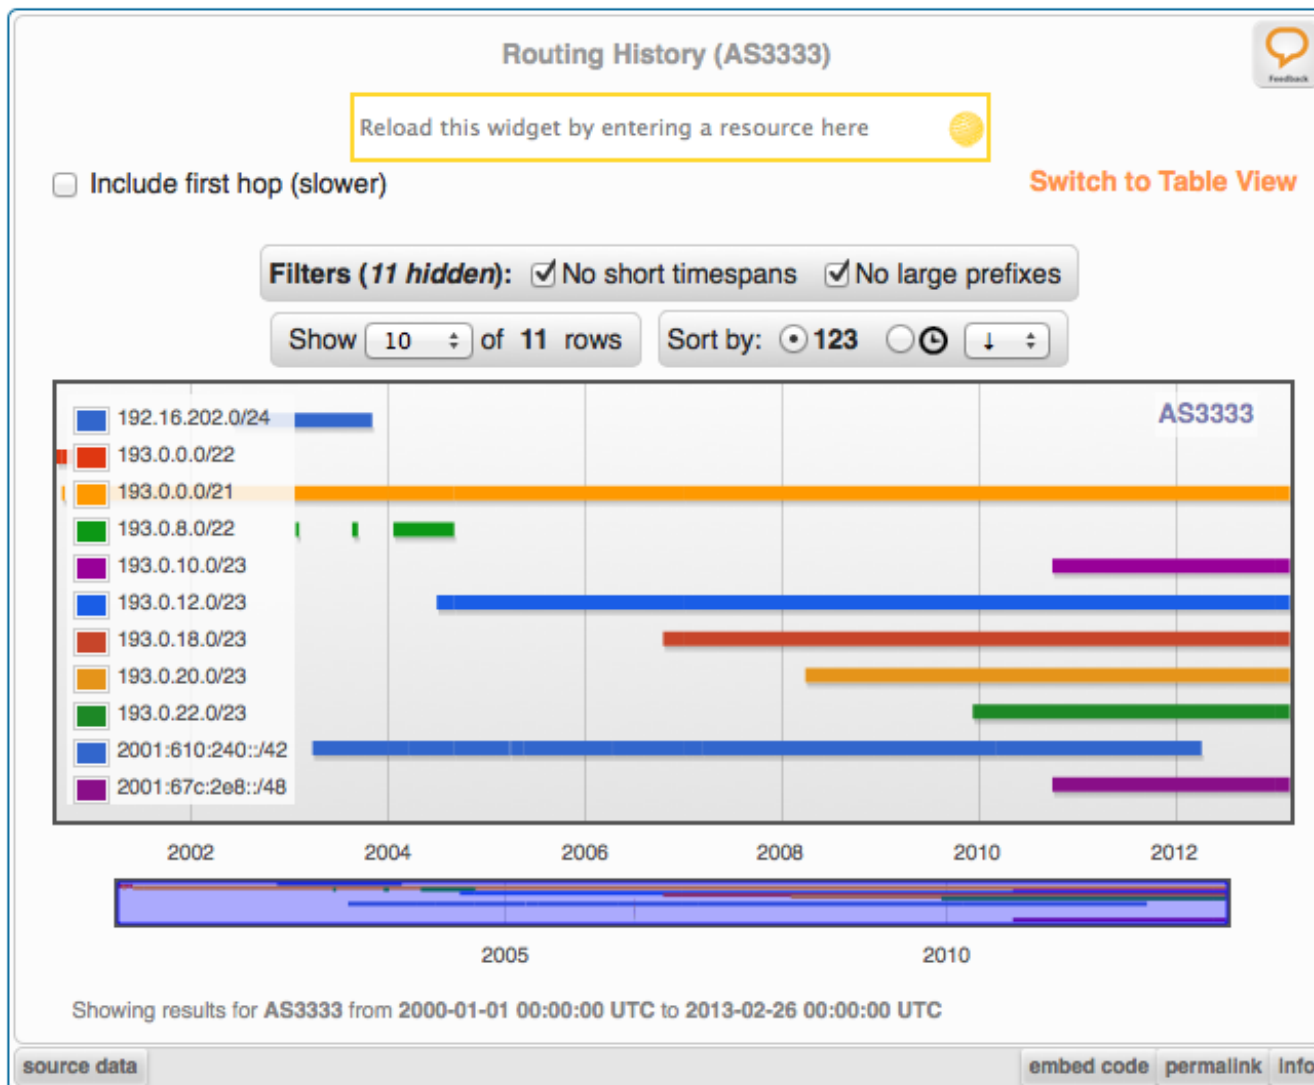

Originated **IPv4** prefixes: **6**
Originated **IPv6** prefixes: **1**
Observed BGP neighbours: **162**
Address space announced (IPv4): **4608** IPs
Address space announced (IPv6): equiv. to **1 /48s**

Compare to 1 week ⌵ earlier

RIPEstat

RIPEstat

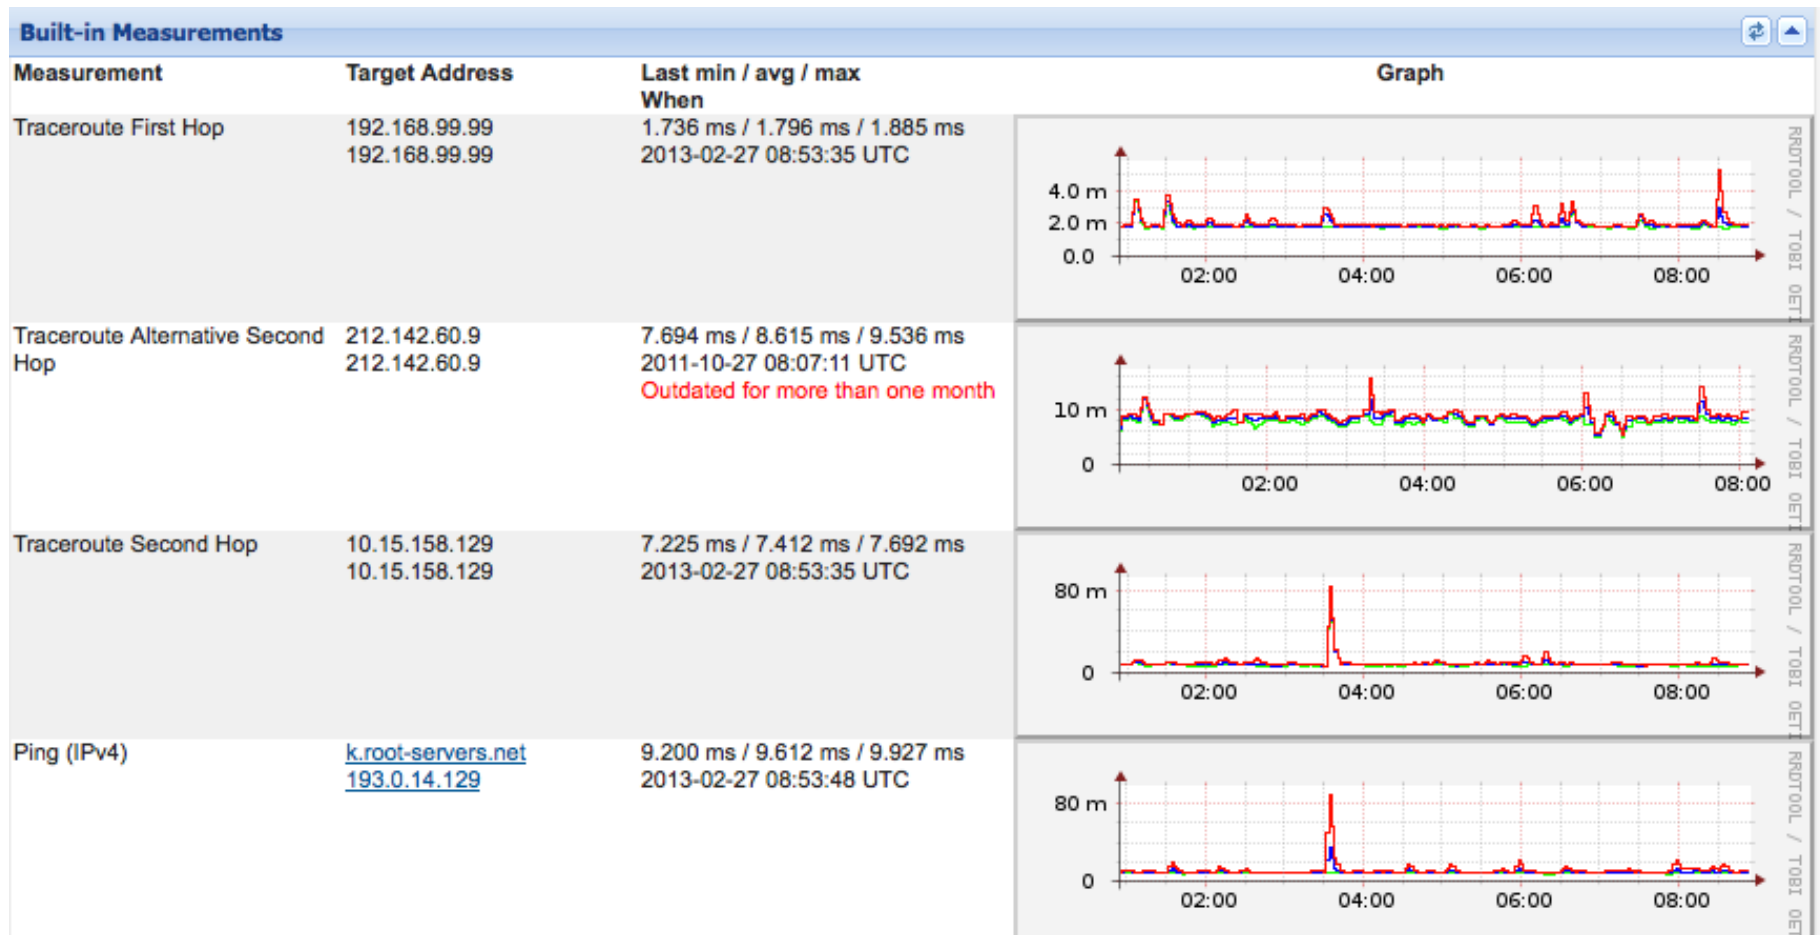

RIPE Atlas

- A measurement network consisting of ~2700 up-and-running vantage points
- Each vantage point is a tiny hardware device (“probe”), hosted by a contributor
- If you host a probe
 - you immediately get access to what it sees
 - you can ask the system to do a measurement for you, using *any* probe(s) in the system

RIPE Atlas

- All probes do built-in measurements, like pings

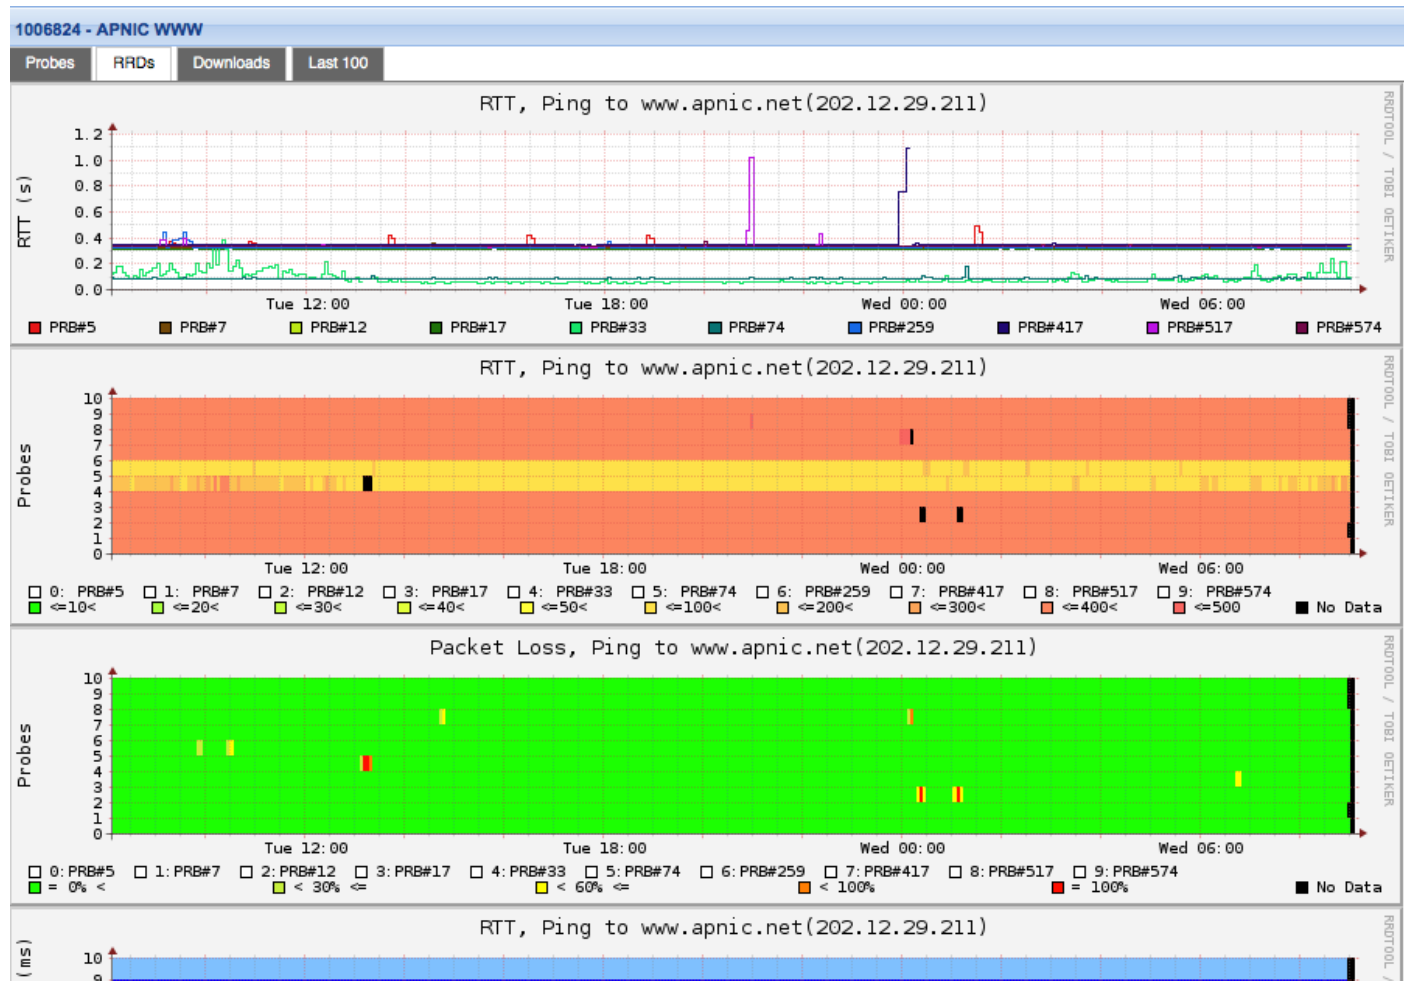

RIPE Atlas

- All probes do built-in measurements, like DNS

RIPE Atlas

- Running your own measurement:

RIPE Atlas

- Deployment of probes focuses on the RIPE NCC service region, but it's useful to be present globally
- If you're interested:
 - Talk to us, we have *some* probes here:
 - Ingrid, Emilio, Robert
 - Or apply on the website
